## 4.1 File List

Here is a list of all files with brief descriptions:

main.cpp
Client code
include/agent.h
Agent class defines all agent specifications
include/color.h
Color class used for agent, path, wall etc. color
include/evade.h
Evade class inherited from scenario class
include/flee.h
Agents flee from mouse scenario
include/flock.h
Flocking agents scenario
include/flowField.h
FlowField class, screen can be filled with a force for each pixel
include/graphics.h
Graphics class, drives openGL
include/mouseFollower.h
Agents follow mouse scenario
include/obstacle.h
Circular obstacles for agent avoidance behaviors
include/obstacleAvoidance.h
Agents avoid from obstacles scenario
include/path.h
Path class used for path following steering behaviors
include/pathFollower.h
Path following scenario
include/point.h
Point class used for point operations
include/prison.h
Agents cant escape from field scenario
include/pursuit.h
One agent pursue other one scenario
include/pvector.h
Pvector class used for 2D vector operations
include/random.h
Utility class for random operations

# **Class Documentation**

## 5.1 agent Class Reference

```
#include <agent.h>
```

Collaboration diagram for agent:

#### **Public Member Functions**

• agent ()

default constructor.

agent (float x, float y)

constructor.

~agent ()

destructor

void updatePosition (bool arrive)

position update calculations

• void setFeatures (float s, float f, float r, float m)

initialize the agent attributes

#### **Public Attributes**

• string name

name of the agent

• color fillColor

color of the agent

· point position

position of the agent

· pvector velocity

velocity of the agent

point targetPoint

target of the agent

float maxSpeed

maximum speed of the agent

```
    float maxForce
```

maximum force of the agent

pvector steering

steering force of the apply

· pvector force

force of the agent

· pvector acceleration

acceleration of the agent

• pvector desiredVelocity

desired velocity of the agent

float r

radius of the agent

float mass

mass of the agent

• int id

id of the agent

• bool arrive = false

has arriving behavior or not

Here is the call graph for this function:

### 6.45.3.5 BOOST\_AUTO\_TEST\_CASE() [5/12]

```
BOOST_AUTO_TEST_CASE ( s1t5 )
```

pvector angle between vectors test case

Definition at line 66 of file test suites.cpp.

Here is the call graph for this function:

#### 6.45.3.6 BOOST\_AUTO\_TEST\_CASE() [6/12]

```
BOOST_AUTO_TEST_CASE ( s1t6 )
```

pvector get vector angle test case

Definition at line 77 of file test suites.cpp.

```
78 {
79    pvector p1 = pvector(3, 4);
